DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/31/07 has been entered.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 14-21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contain subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention.

A. As per claims 14 and 21, the specification as originally filed does not provide clear support for at least a GNSS attitude subsystem for computing reference attitude angles and a function for calibrating bias and scale factor errors in a yaw gyroscope using the computed reference attitude angles as claimed. If applicant disagrees, it is requested that the above noted claim language be mapped to the relevant portions of the specification (i.e., paragraph/line number) which clearly supports the language used in the claims.

B. Dependent claims 15-20 are rejected for at least the reasons noted above for base claim 14.

4. Claims 14-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A. As per claim 14, the claim states that the steering control system is connected to the GNSS subsystem but uses the output from the yaw gyroscope. It appears the yaw gyroscope should also be connected to the steering control subsystem such that the output therefrom can be used as claimed.

B. As per claim 16, the claim is unclear whether the "steering control subsystem connected to said GNSS attitude subsystem" recited at line 6 is the same one recited in claim 14 or an additional subsystem. If they are one in the same, it is suggested that "a" be changed to --said-- at line 6.

C. All claims depending from a rejected base claim are also rejected as containing the same deficiencies.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited documents are of general interest.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael J. Zanelli whose telephone number is (571) 272-6969. The examiner can normally be reached on Monday-Thursday 9:00 AM - 4:00 PM.
